

Genetics for people

My Folate

What is the MyFolate test?

The MyFolate test is a genetic test that analyses genes related to the metabolism of folic acid (vitamin B9), an essential nutrient for many vital body functions.

What is MyFolate for?

The MyFolate test is used to identify how a person's genetics impact on folic acid metabolism, allowing nutrition and supplementation to be adjusted to maximise its benefits.

Who is MyFolate for?

All professionals who wish to optimise their patients' folic acid intake on an ad hoc or regular basis.

DISCOVER HOW TO MAXIMISE HEALTH THROUGH GENETICS!

Introducing MyFolate

- MyFolate is a genetic test that allows to know genes related to the metabolism of folic acid (vitamin B9).
- MyFolate is a non-invasive test. The DNA is obtained from a saliva sample, it is completely painless and is suitable for any person of any age.
- MyFolate is performed once in a lifetime, your genetics do not change.
- Innovative technology that offers greater accuracy and depth in the results.
- Once the sample has been received in the laboratory, you will receive your results within a maximum of 20 days.
