

Genetics for people

My *Neuro*

OPTIMISE AND PERSONALISE YOUR TREATMENTS THROUGH GENETICS

Personalised medicine

In a broad sense, personalised medicine could be defined as medicine that is tailored specifically to each individual, not thinking of a group or set within the population, but of each person, so that treatments are tailored as closely as possible to the specific individual characteristics of each patient.

This concept is linked to knowledge of the patient's genetics, since both the genome and the environment are responsible for the phenotype of the individual, which is the set of visible characteristics that an individual presents as a result of the interaction between its genotype and the environment.

What is MyNeuro for?

The MyNeuro test determines the presence/absence of genetic variants related to biological processes that influence brain function and mood. This genetic information provides insight into an individual's predisposition to develop:

- Alterations in behavioural regulation
- Addictive behaviours
- Disturbances in emotional homeostasis
- Neurodegenerative diseases

Who is MyNeuro aimed at?

All professionals who wish to improve the mental health of their patients, help them to prevent and manage emotional disturbances, stress control...

What does the MyNeuro test analyse?

The test analyses genetic markers involved in the following biological processes and genes related to certain neurotransmitters and their receptors:

- **Dopamine**
- **Serotonin**
- **GABA**
- **Endocannabinoids**
- **Cell signalling**
- **Wnt signalling**
- **Stress response**
- **Neuroinflammation**
- **Methylation**

Introducing MyNeuro:

- MyNeuro is a genetic test that determines the presence/absence of genetic variants related to biological processes that influence brain function and mood.
- MyNeuro helps you to better understand your mental health, prevent and manage emotional disturbances, manage stress and improve your mental health.
- MyNeuro is a non-invasive test. DNA is obtained from a saliva sample, is completely painless and is suitable for any person of any age.
- MyNeuro is a once in a lifetime test, your genetics do not change.
- MyNeuro analyses genetic markers at the highest level of scientific evidence.
- Innovative technology that offers greater accuracy and depth in the results.
- Once the sample has been received in the laboratory, you will have your results within 20 days.
